

2) Purpose of HTML

HTML helps give the structure of our webpage. It is basically the bricks of a house.

^{we} If select a html element and type 'Ctrl + /' then that particular text will not be rendered in our web page.

4) Tag → In HTML tag refers to specific set of characters ~~which refers to~~ which enclose by $\langle \rangle$.

Element → HTML is constructed with elements. Each element consist of opening tag, content, closing tag.

5) Doctype is declared because it specifies that this HTML is being used as a

document and helps the browser to render the content.
